

Hello KSM Patient,

At Kidney Specialists of Minnesota, we rely on all members of our highly trained clinical care team to provide comprehensive, wraparound care in our outpatient clinics. Our care team includes nephrologists, Advanced Practice Providers (APPs), and a renal dietitian.

Our APP's will be involved in your care, in collaboration with your Nephrologist, to assure your kidney care needs are being addressed and your health is being closely monitored. Because some of our patients will unfortunately require more urgent attention in a hospital or dialysis clinic, our nephrologists rotate between area hospitals and dialysis units in addition to KSM clinics. Knowing that there may be times when a physician is not available, KSM depends on our APPs to provide timely outpatient care to our patients with chronic kidney disease (CKD). These providers hold a Minnesota licensure of nurse practitioner (NP) or physician assistant (PA), with specialized nephrology experience and training in our highly collaborative clinic environment.

We are confident in our entire clinical team and their ability to support your care plan.

Warm regards,

Kidney Specialists of Minnesota
